

MATH 453: NUMERICAL OPTIMIZATION

Spring 2020

Instructor:	Dr. Stathis Charalampidis	Office:	25-319 (Faculty Offices East)
Email:	echarala@calpoly.edu	Phone:	(805) 756-2465

Course Web Page: https://web.calpoly.edu/~echarala/teaching/453/math_453_S20/

Class Meetings:

- Section 1 (MTRF): 9:10-10:00am

Office Hours: TR 10:30am-11:45am and 01:15-02:30pm, or by appointment.

Access to the course: This quarter, we will be using Zoom. Please, login to:

<https://calpoly.zoom.us/>

using your Cal Poly credentials. Note that the Zoom ID numbers have already been sent to you in order to attend classes and office hours. In addition, meeting passwords are required and were sent to you as for an extra layer of security.

Required Textbook:

- *An Introduction to Optimization* (4th edition), Authors: Edwin Chong and Stanislav Žak, Publisher: John Wiley & Sons, 2013.

Additional Reference:

- *Numerical Optimization* (2nd edition), Authors: Jorge Nocedal and Stephen Wright, Publisher: Springer, 2006.

Objectives: This course is the third part of the Numerical Analysis sequence (Math 451-Math 452-Math 453) offered at Cal Poly San Luis Obispo. It deals with the development of numerical methods for selecting the “best” decision of an *objective function*. **Optimization** problems arise in many scientific fields and applications, including (but not limited to) aero-space engineering (for finding the optimal trajectory for an aircraft or computing the optimal shape of an automobile), finance (to maximize expected return while maintaining an acceptable level of risk during an investment), materials science (for designing energy harvesters by maximizing energy conversion), as well as computational physics and applied mathematics. In this course, we will discuss about the foundations of numerical optimization such as unconstrained optimization, linear programming as well as nonlinear unconstrained optimization. Alongside the theory, we will gain practical programming experience in implementing some of the algorithms using MATLAB, which will be taught through increasingly complex codes over the quarter, with examples in class and homework assignments. A detailed course outline containing the learning objectives for this class may be found at

<https://content-calpoly-edu.s3.amazonaws.com/math/1/documents/453.pdf>

Class Material by Topic: During the quarter, we will cover the following topics from the main textbook:

- Mathematical review (briefly)
- Unconstrained optimization (line search algorithms; Newton’s and Quasi-Newton’s methods; global search algorithms)
- Linear programming (simplex method; integer linear programming)
- Constrained optimization (Convex optimization problems; Lagrangian algorithms and penalty methods)

Course Prerequisites: Math 306 and Math 451.

Programming Prerequisites: Introductory college-level programming course. It should be noted that **MATLAB** will be used in class and for homework assignments. Of course you can use **any** programming language such as Python, Fortran, C (or C++), and so on. There are a few PDF files and links for help with MATLAB on the course web page.

Homework and Exams: There will be (almost) weekly **written** homework assignments including **computational tasks**. For the latter, you will have to include/attach your codes in your homework. Please make sure you include as many **comments** as possible in your codes such that they could be read easily. Each assignment will consist of a group of problems and your task will be to write up solutions for each one and develop codes when the question is asking for doing so. Please keep in mind that you will be rewarded not only for getting a correct answer but equally importantly for the structure and presentation of your work. Finally, struggling through a question in the homework and most particularly in a computational/programming task is not something unusual. Please make sure you start developing your codes way in advance in order you to check and debug your programs.

There will be two **take home exams: one midterm and one cumulative final**. For their schedule, see next the “Important Dates” section of this document.

Important Dates:

Midterm	Friday, May 8
Final Exam	Friday, June 12

Grading Policy: Your final grade in this course is computed according to:

Homework	40%
Midterm	30%
Final Exam	30%

Exams and Class Policies:

- All exams are **take-home** exams.
- You are respectfully asked for turning off your cell phones during class time.
- **Attendance is mandatory**. However, an **excused absence** can be allowed only if the reason for your absence falls into any of the categories listed in the following page:

<https://academicprograms.calpoly.edu/content/academicpolicies/class-attendance>

Please inform me as soon as possible if you are seeking to make up missed work pursuant to the excusable reasons listed in the url above.

Students with Disabilities: The University provides disability-related support services to qualified students through the Disabilities Resource Center (DRC). If you have a disability for which you are or may be requesting an accommodation, you are encouraged to contact both me and the DRC (124-119) at (805) 756-1395, as early as possible in the term. In addition, and for your convenience, their website is <https://drc.calpoly.edu/>. Note that use of DRC services including testing accommodations requires prior authorization by the DRC and compliance with approved procedures. **Make sure you initiate any needed arrangements well in advance of an exam date.**

Diversity and Inclusion: I am fully committed to an academic environment that is free of bias against any group and I firmly believe in the value of diversity in people and ideas. My ultimate goal is to establish that this class is a welcoming environment to every-one regardless of gender identity, sexual orientation, race, ethnicity, or religious identity. The University and I do not tolerate discrimination. Please feel comfortable coming to me or an administration if at any point you ever feel uncomfortable for any reason.
